HTX JETSTREAM / HIGH PRESSURE WASH

Optionally available is our special High-Pressure devise JETSTREAM, equipped with oscillating high-pressure spot jet nozzles.

This high-pressure pre wash device is available in a Stationary and Integrated into the wash portal of the truck wash .

Features

- mounting kits are available for the MAGNUM-5
- the high pressure nozzles can be integrated to existing wash machines or stand alone
- the high pressure nozzles have both oscillating and swivelling movement
- the system can allow for up to 10 modules per side (max power 80 bar)
- Stationery Portal frame is made from galvanised steel

Our special high-pressure JETSTREAM that is equipped with oscillating high-pressure blast nozzles is optionally available. This high-pressure unit is available as a stationary and integrated version. The JETSTREAM solution that is integrated into the wash portal is used wherever there is not much "manpower" available or where the vehicle contour would require a high degree of personal pre-cleaning.

HTX UNIROLL / SINGLE BRUSH WASH

The HTX-UNIROLL is the new mobile single-brush system intended for all types of small fleets both indoors and outdoors.

Completing a full service wash in less than 10 minutes without having to move the vehicle, this light and motorised standalone equipment is the perfect solution for the daily wash and care of transport fleets and buses.

The unit has a 300 litre on-board tank as well as a set of batteries that ensure uninterrupted autonomy and operation for up to 30 wash services.

HTX-UNIROLL is a compact, easy-to-use equipment that does not generate any fumes and does not need either an electrical connection or a water supply.

- Vehicle heights from 3.65m – 4.25m
- 300 litre onboard tank
- Battery operation for up to 30 wash services
- Tilting brush with hydraulics for wedge shaped trucks
- High efficiency batteries
- Ergonomic controls for soft movement

AEROPRO

HIGH-PERFORMANCE DRYER FOR TRUCK WASHES

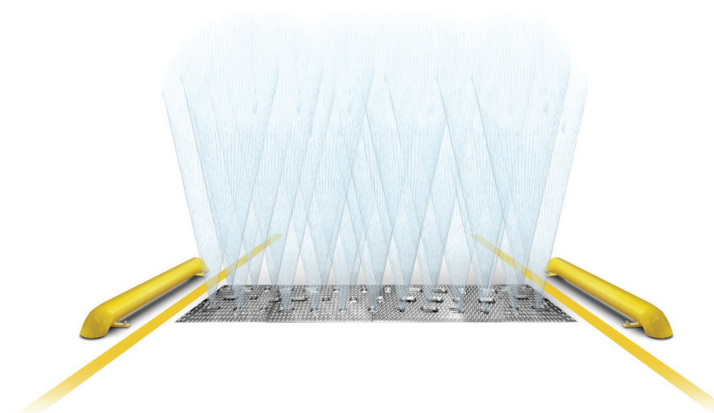

The requirements for a modern commercial vehicle wash are becoming increasingly extensive. Years ago, the focus was solely on vehicle washing, but today holistic concepts for commercial vehicles are desired. In addition to the qualified washing result, the topic of drying is dealt with by our fully automatic drying fan AEROPRO.

As a possible addition, we now offer our high-performance dryer AEROPRO in our commercial vehicle portfolio. The outstanding feature of our AEROPRO drying fan is that the air flow is initially directed from diagonally above against the front of the vehicle. By swivelling the blower unit or air outlets, the air flow (always from above) can be directed to lateral parts of the vehicle or roof and rear sections. The variable attachment can be done on one of our commercial vehicle washes

Roof blower 2 x 7.5kW motors

UNDER CHASSIS WASH / TRUCKS & BUSES

For the automated cleaning of the truck or bus under body, then look no further than the renowned Hartex under chassis wash UCW range. Ideal for preparing your vehicles for RMS inspection.

- Provides a clean truck or bus for mechanics to work on
- Easier to diagnose mechanical faults
- Improves road safety by reducing oil drops on the road
- Clean and easy to operate by vehicle driver
- Very little maintenance required, cold water only
- Ideal for all heavy vehicles, trucks, buses and coaches
- Spray bar activation when the vehicle entering the wash bay breaks a light beam
- Sensor switch mounted inside the holding tank for dry run protection

MAGNUM 5 / HTXMAG05 / DRIVE-THRU

Suitable for Truck, Bus, Tankers, Motorhomes and more

Fast and effective washing technology to minimize the operating costs within the shortest possible washing time. Think of the Magnum 5 as a range of machines. Can be ordered as a 2 brush, 3 brush, 4 brush or 5 brush machine offering the best customized wash option on the market.

The Magnum 5 truck and bus wash system can be operated in the bus operating concept (STOP and GO configuration, or in the contract washing operating concept (overrun washing)

With the Innovative 5- wash roller concept the Magnum 5 truck and bus wash creates the symbiosis of quality and quantity in vehicle washing.

- Robust Cube shape-structure galvanized steel structure
- 2 or 4 Vertical Brushes- wash height 3400-5000mm)
- 1 Horizontal brush (Top Brush – optional)
- Frequency controlled motor drives for soft start and stop, extending running life of motors and gearboxes
- Mirror avoid programs standard.
- Vertical brushes have Centre -cross over wash so no dirty strip of unwashed surface is left
- Alcove wash program for motor homes
- Integrated High-Pressure wash options – static and rotary options
- Ideal for washing buses, semi trailers.
- Can be setup in washbays shorter than proposed vehicle length with the STOP and GO Feature.
- Minimum washbay length = 10m

NOVA / 5HT-R0 / ROLLOVER

The new range of fully Automatic washing of commercial vehicles combines design and state of the art technology

Suitable for Truck, Bus, Tankers, Motorhomes and more

- Robust Cube shape-structure galvanized steel structure (powder coating in corporate colours optional)
- 2 Vertical Brushes with a wash height 3400-5000mm)
- 1 Horizontal brush (Top Brush)
- Frequency controlled motor drives for soft start and stop, extending running life of motors and gearboxes
- Vertical brushes have Centre - cross over wash so no dirty strip of unwashed surface is left and Mirror avoid programs standard.
- Alcove wash program for motor homes, Integrated High-Pressure wash options – static and rotary options
- Patented split brush design on vertical brushes to allow for tankers
- Can add Jetstream high pressure option for a cost effective pre-wash that gives a deeper clean. The only vehicle wash machine in the world with Jestream technology
- Can be upgraded with optional dryer modules
- Requires a washbay that is vehicle length + 6m long. For sites with shorter washbays consider the Magnum range of machines

ECOBUS / STOP & GO ROLLOVER

The Drive through ECOBUS has been designed for bus fleets

The factor of time savings has become the dominant reason for the purchase of a bus wash.. The logically thought-out asymmetrical washing brush arrangement of the ECOBUS takes this trend into account with an extremely effective washing result.

- Robust Cube shape-structure galvanized steel structure
- 4 Vertical Brushes- wash height 3400-4500mm)
- 1 Horizontal brush (Top Brush – optional)
- Frequency controlled motor drives for soft start and stop, extending running life of motors and gearboxes
- Mirror avoid programs standard.
- Minimum washbay length = 10m
- Wash duration of a school bus – 90 seconds

Vehicles to be cleaned are washed quickly and thus minimizing operating costs. This pays off especially when cleaning in shifts. In order to ensure the longevity of this capital product, the frame parts, swivel arms and sprayers of this system are made entirely of hot-dip galvanized steel.
